

Stone Fon 98 Powder

Stonefone – For healthier, parasite-free animals.

Stone Fon 98 Powder

COMPOSITION:

Each gram contains
Trichlorfon.....980mg

DESCRIPTION:

Stonefon 98 powder is a broad-spectrum ectoparasiticide for ruminants. It controls flies, ticks, lice, and other external parasites by inhibiting acetylcholinesterase, causing paralysis and death of parasites. Stonefon ensures reliable parasite control, improves animal comfort, and enhances health and productivity.

MECHANISM OF ACTION:

Stonefon 98 powder containing Trichlorfon is an organophosphate antiparasitic agent that exerts its effect by inhibiting the enzyme acetylcholinesterase (AChE) in target parasites. This inhibition leads to the accumulation of acetylcholine at nerve synapses, resulting in continuous nerve stimulation. The overstimulation of the nervous system ultimately causes paralysis and death of the parasite, making Trichlorfon a highly effective treatment against a wide range of internal and external parasites in livestock.

INDICATIONS:

Stone Fon 98 powder is indicated for control of ectoparasites like ticks, lice, fleas, mange, mites and flies etc in domestic animals and birds. It is also highly effective for control and treatment of various endoparasites in livestock like cattle grubs, pinworms, screw worms, nasal bots and other gastrointestinal parasites.

DOSAGE AND ADMINISTRATION:

For External Use: Dissolve 1.5 grams of Stone Fon 98 powder in 1 litre of clean water. Spray the solution thoroughly on the animal's body, and in the surrounding environment (floor, walls, ceiling), especially in areas where mosquitoes, ticks, flies, and other insects breed and multiply. A solution of 1.5gm per litre is used to dip the bird for 1 to 2 minutes to get rid of ecto parasites. For Internal Use: Dissolve 10 grams of Stone Fon 98 powder in 100 ml of clean water. Administer orally at a dose rate of 0.3 to 0.5 ml per kg of body weight.

PRECAUTIONS:

Store in a cool, dry place, away from feed and food materials. Keep out of reach of children. Avoid exposure to direct sunlight and moisture. Use externally only in pregnant animals.

اجزائے ترکیبی:

ہر گرام میں شامل ہے۔

ٹرائی کلور فون.....980 ملی گرام

(انوویٹر سپیکس)

PACKING: 10 gram and 100 gram

بیرونی استعمال کے لیے: 1.5 گرام پاؤڈر 1 لیٹر صاف پانی میں حل کر کے جانور پر سپرے کریں۔

اندرونی استعمال کے لیے: 10 گرام پاؤڈر 100 ملی لیٹر پانی میں حل کر کے 0.3 سے 0.5 ملی لیٹر تک

فی کلو گرام جسمانی وزن کے مطابق پلائیں۔

احتیاطی تدابیر: ٹھنڈی اور خشک جگہ پر کھانے پینے کی چیزوں اور بچوں کی پہنچ سے دور رکھیں۔

زہریلے اثرات نمایاں ہونے کی صورت میں فوراً ویتھرنری ڈاکٹر سے رجوع کریں۔
